This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A method for evaluating treatment efficacy in pregnant mares affected by a disease or condition that alters placental function and results in a problematic pregnancy or delivery in the mare comprising

(a) measuring a first level of relaxin in blood of a pregnant mare that has or is suspected to have a disease or condition that alters placental function, wherein said first level is measured before administration of a drug or treatment for said disease or condition;

(b) administering the drug or treatment to the mare to improve pregnancy outcome for a fetus or foal; and

(c) measuring levels of relaxin in blood of the mare following administration of the drug or treatment administration until the time of delivery of the mare, wherein a failure of the blood relaxin levels to increase following drug or treatment administration is indicative of a non-effective treatment in preventing a problematic pregnancy or delivery in the mare.

Claim 2 (canceled).
